This was from yesterday to a generic email account. Do we need to respond at this point? If yes, I am okay with you responding using the statement that NWS Birmingham responded to inquiries and to assure the public that Alabama was not in the projected path.

For background for us. This is the official statement regarding the statement on Sunday.

- **Alabama Impacts from Hurricane Dorian:**

- According to the National Hurricane Center’s late morning update – released just prior to the President’s briefing – a small portion of the southeast coast of Alabama could in fact see some tropical storm force wind and rainfall impacts as a result of Hurricane Dorian.
- As we have seen over the past week, storm tracks can change quickly and everyone in the

potential path of the storm, as well as neighboring states, should continue to monitor the weather for the most up-to-date information.

Kindest regards,  
Julie Kay Roberts, CEM  
Deputy Chief of Staff  
National Oceanic and Atmospheric Administration

**Subject:** Media Inquiry: POTUS Tweet

Hi Julie, Scott, Chris - Please see below. WFO Birmingham forwarded this media request on POTUS Tweet for followup. The answer is the latter part of Daniel's question. If you'd like for me to respond, please advise.  
Thank you, -Susan

Susan,

We received this request from the Washington Examiner. I would assume that PA would like to handle this one?

As I mentioned in the email to the staff Sunday evening, the general timeline was as follows:

Day shift on Sunday starts to receive a large/inordinate amount of calls and post/questions on social media about possible impacts in Alabama (from Dorian).

**(b)(6)** send out a note on social media (Twitter/FB) to let folks know that Dorian does not appear to be a threat for the state.

Some time later (they estimate about 10 minutes), the staff is made aware of the POTUS tweet when James Spann direct responds to the POTUS Tweet. That was the first time the staff in the office saw it.

So, in short, our tweet/FB post was to try and dispel rumors and not in "direct" response to the POTUS.

Thanks.

Chris

Chris,

We got the following email in the webmaster account yesterday. I'll let you or NWS PA handle it. Thanks!

Tara

Good evening,

President Trump tweeted on Saturday that Hurricane Dorian may hit Alabama. 20 minutes later the National Weather Service tweeted "Alabama will NOT see any impacts from #Dorian. ... The system will remain too far east."

Can you tell me if this message from NWS was sent in response to Trump or because of calls coming into the station from people concerned the hurricane would be turning towards Alabama?

Regards,  
Daniel Chaitin
